|--|-----------|
| INTRODUCTION   | 3         |
| <b>Part I EXAMINATION OF MATERIAL MODELS</b>   | <b>5</b>  |
| 1. Photoelasticity (Jerzy Bojanowski <sup>1</sup> )  | 5         |
| 2. Method of photoelastic coating (Jerzy Bojanowski)   | 14        |
| 3. Transducers for measurements of non-electric quantities by electric methods<br>(Jerzy Bojanowski) | 17        |
| <b>3.1. Strain gauge transducers</b>   | <b>18</b> |
| 3.1.1. Force transducer – tension/compression system   | 23        |
| 3.1.2. Force transducer – system with bending  | 24        |
| 3.1.3. Transducer of torsional moment  | 25        |
| 3.1.4. Torque transducer   | 26        |
| 3.1.5. Transducer of braking torque  | 27        |
| 3.1.6. Seismic transducer  | 29        |
| 3.1.7. Calibration of strain gauge transducers   | 32        |
| <b>3.2. Transducers of rotational speed</b>  | <b>32</b> |
| 3.2.1. Photoelectric transducer  | 33        |
| 3.2.2. Tachometric AC generator  | 34        |
| 4. Analog-to-digital conversion in measurements (Lech K. Śliwa <sup>2</sup> )                        | 34        |
| <b>4.1. A/D converter operating characteristics</b>  | <b>36</b> |
| 4.1.1. Quantization error  | 36        |
| 4.1.2. Quantization noise and dynamic range of A/D converter   | 37        |
| 4.1.3. The effect of sampling rate   | 39        |
| <b>4.2. Principles of operation of analogue-to-digital converters</b>                                | <b>39</b> |
| 4.2.1. Successive approximation A/D converter  | 39        |
| 4.2.2 Dual-slope integrating A/D converter   | 41        |
| 4.2.3. Delta-Sigma converters  | 43        |
| <b>4.3. Multichannel converters</b>  | <b>45</b> |
| <b>4.4. Selection of A/D conversion parameters</b>   | <b>46</b> |
| 5. Elaboration of measurement results (Lech K. Śliwa, Jerzy Bojanowski)                              | 47        |
| <b>5.1. Errors in direct measurement</b>   | <b>48</b> |
| 5.1.1. Systematic errors   | 48        |
| 5.1.2. Random errors   | 49        |

<sup>1</sup> Jerzy Bojanowski, PhD. Institute of Aeronautics and Applied Mechanics,

<sup>2</sup> Lech K. Śliwa, PhD. Institute of Physiology and Pathology of Hearing, World Hearing Center.

|   |     |
|---|-----|
| <b>5.2. Errors of indirect measurement</b>                                      | 51  |
| 5.2.1. Systematic errors in indirect measurements                               | 51  |
| 5.2.2. Random errors in indirect measurement                                    | 52  |
| <b>5.3. Application of regression method in elaborating measurement results</b> | 53  |
| <br>  |     |
| <b>Part II INSTRUCTION OF EXPERIMENTS</b>                                       | 55  |
| Experiment 1. BELT TRANSMISSION   | 55  |
| Experiment 2. SUPPORT OF AXLES AND SHAFTS IN ANGULAR BEARINGS                   | 61  |
| Experiment 3. SCREW MECHANISMS AND JOINTS                                       | 66  |
| Experiment 4. FRICTION CLUTCHES AND BRAKES                                      | 73  |
| Experiment 5. HIGHLY-LOADED CONSTRUCTION JOINTS                                 | 80  |
| Experiment 6. RESISTANCE TO MOTION IN ROLLING BEARINGS                          | 88  |
| Experiment 7. SELF-LUBRICATING SLIDE BEARINGS                                   | 92  |
| Experiment 8. STRESS CONCENTRATIONS IN MACHINE ELEMENTS                         | 100 |
| Experiment 9. GEAR TRANSMISSION   | 104 |
