Acknowledgments	v
Abstract/Résumé	vii
Introduction	xi
List of Figures	xx
List of Tables	xxii
1 Concepts of Beam Dynamics	1
1.1 Motion in Particle Accelerators	1
1.2 Magnetic Elements and Chromatic Correction	5
1.3 Particle Beams	14
1.4 Particle Colliders	15
1.5 Circular Accelerators	20
1.6 Beam-Beam Effects	22
1.7 Synchrotron Radiation	25
2 LHC Optics and Upgrades	27
2.1 The Large Hadron Collider	27
2.2 High Luminosity Insertions	28
2.2.1 An Antisymmetric IR	30
2.2.2 Arc Optics	32
2.2.3 Matching and Flexibility for $\beta_{x,y}^*$	34
2.3 The LHC Chromatic Correction	35
2.4 LHC Limitations, Achievements	36
2.5 LHC Future Plans	37
2.5.1 Luminosity Increase: HL-LHC	37
2.5.2 Energy Upgrade: HE-LHC	38
2.5.3 Electron-Proton Collisions: The LHeC	38
2.6 Conclusions	38
3 Novel Elements for an LHC Luminosity Increase	39
3.1 Chromatic Correction	39
3.1.1 ATS (Achromatic Telescopic Squeeze)	39
3.1.2 The Local Chromatic Correction Scheme	39

Contents

3.1.3	Local Chromatic Correction for the LHC	40
3.2	Flat Beams	40
3.2.1	A New Flat-Beam Optics for Present LHC	41
3.2.2	Limitation of the Antisymmetric Optics for Flat Beams	48
3.3	Large Piwinski Angle	48
3.3.1	Large Piwinski Angle for the LHC	49
3.4	The Crab-Waist Collision Scheme	50
3.4.1	Crab-Waist Transformation	51
3.4.2	Crab-Waist Collisions at DAΦNE	54
3.4.3	Crab-Waist Collisions in the LHC	60
3.5	Conclusions	61
4	Towards a Very Flat Beam Optics with Large Crossing Angle for the LHC	63
4.1	An LHC with Crab-Waist Collisions	63
4.1.1	Beam-Beam Simulations with Frequency Map Analysis	64
4.1.2	Design Considerations	65
4.1.3	Advantages of a Large Piwinski Angle	66
4.1.4	Approach to the Problem	66
4.2	The Double-Half Quadrupole Design	68
4.2.1	Beams in the DHQ	71
4.2.2	Multipolar Analysis	71
4.2.3	Segmentation of the DHQ	73
4.2.4	Magnetic Properties	73
4.2.5	Comparison with a Sextupole	74
4.3	First Interaction Region Design	75
4.3.1	Optics	75
4.3.2	Beam Separation and Geometry	78
4.3.3	Sextupole Arrangement	79
4.3.4	Chromatic Correction	81
4.3.5	Luminosity and Beam-Beam Estimation	82
4.3.6	Influence on Luminous Region	83
4.4	Matching a Symmetric IR Optics to the LHC Arcs	83
4.4.1	Twiss Functions Matching	84
4.4.2	Dispersion Matching	85
4.4.3	Modification of One LHC Cell	86
4.4.4	Modification of Two LHC Cells	88
4.5	Alternatives	89
4.5.1	Crab Cavities	89
4.5.2	Dipole Insertion	89
4.5.3	Double-Aperture Quadrupole	89
4.5.4	Unequal Emittance in the two Planes	90
4.6	Conclusions	91
5	A Flat-Beam LHC with Local Chromatic Correction	93
5.1	Motivation of the New Design	93

5.1.1	Rescaling of the DHQ	93
5.2	Second Interaction Region Design	96
5.2.1	Optics and Geometry	96
5.2.2	Chromatic Correction	98
5.2.3	Aberration Compensation	99
5.2.4	Matching to the Arc Optics	101
5.3	System Performance	102
5.3.1	Luminosity	102
5.3.2	Chromatic Beta Beat	102
5.3.3	Tracking Simulations	104
5.4	Non-Colliding Optics	105
5.4.1	Injection Optics	105
5.4.2	Beam Separation	107
5.5	Conclusions	107
6	Future Colliders in the LHC Tunnel	109
6.1	A New Circular e^+e^- Collider: LEP3	109
6.2	A Higher Energy Proton Collider: HE-LHC	109
6.2.1	Starting Point	110
6.2.2	A Special Proton Storage Ring	111
6.3	A Symmetric IR for the HE-LHC	112
6.3.1	Parameter Evolution	114
6.3.2	HE-LHC as a Proton-Antiproton Collider	119
6.4	Conclusions	119
7	Final-Focus System for the LHeC	121
7.1	The LHeC	121
7.2	Interaction Region Layout	122
7.3	Optics	123
7.3.1	Triplet Design	124
7.3.2	Short Doublet Design	125
7.3.3	Long Doublet Design	126
7.4	Tracking Simulations and Comparison	127
7.4.1	Phase Advance Study	131
7.4.2	Synchrotron Radiation Power	131
7.5	Conclusions	132
8	Summary and Final Conclusions	135
A	Transfer Maps	137
A.1	Single Particle Tracking	137
A.2	Beam Tracking: MAPCLASS	137
A.3	Transfer Matrix between Elements	138
	Bibliography	141
