Abstract	i
Preface	iii
List of publications and author's contribution	v
Lists of symbols and abbreviations	xiii
1 Introduction	1
1.1 Scope of the thesis	2
1.2 Structure of the thesis	3
2 Superconducting accelerator magnets and their protection	5
2.1 Superconducting accelerator magnets	6
2.1.1 Particle accelerators in high energy physics	6
2.1.2 General features of accelerator magnets	6
2.1.3 Superconducting materials	7
2.1.4 Practical conductors	8
2.1.5 Coils and magnet assembly	10
2.2 The Large Hadron Collider	13
2.2.1 Superconducting magnets	14
2.2.2 Upgrades R&D program	14
2.3 Quench protection of accelerator magnets	19
2.3.1 What is a quench?	19
2.3.2 Peak temperature estimation	20
2.3.3 Quench detection	21
2.3.4 Current supply disconnection	23

2.3.5	Quench protection	23
2.3.6	Quench protection simulation tools	26
2.4	Review of heater designs	28
2.4.1	Heaters in the Tevatron	28
2.4.2	Copper plated heaters in the LHC	29
2.4.3	Stainless steel strips in Nb ₃ Sn R&D Magnets	31
3	Protection heater delay simulation	33
3.1	Thermal model	34
3.1.1	Heater powering	37
3.1.2	Boundary conditions	37
3.1.3	Numerical solution	38
3.1.4	Material properties	40
3.2	Comparison with an analytical solution	40
3.3	Comparison with commercial FEM software	41
3.4	Concluding remarks	44
4	Protection heater delay measurements and comparison with simulation results	45
4.1	Experimental procedure	46
4.2	Nb ₃ Sn High-gradient Quadrupole	47
4.2.1	Heater design	47
4.2.2	Experiment	48
4.2.3	Simulation	48
4.2.4	Simulation vs. experiment	52
4.3	Nb ₃ Sn Long Quadrupole	53
4.3.1	Heater design	53
4.3.2	Experiment	55
4.3.3	Simulation	56
4.3.4	Simulation vs. experiment	56
4.4	Nb ₃ Sn High-field Dipole	58
4.4.1	Heater design	58
4.4.2	Experiment	58
4.4.3	Simulation	59
4.4.4	Simulation vs. experiment	60

4.5	Nb ₃ Sn 11 T dipole	61
4.5.1	Heater design	61
4.5.2	Experiment	62
4.5.3	Simulation	62
4.5.4	Simulation vs. experiment	63
4.6	Analysis of uncertainties	64
4.6.1	Experimental uncertainty	65
4.6.2	Simulation uncertainty	67
4.7	Concluding remarks	71
5	Optimization of the heater layout using parametric analysis	73
5.1	Estimations of needed heater efficiency	74
5.1.1	Numerical simulation	74
5.1.2	Comparison with existing technology	75
5.2	Design variables	75
5.3	Heater design method	78
5.3.1	Goal	78
5.3.2	Heater layout concepts	79
5.3.3	Optimization method	81
5.4	New heater designs	83
5.4.1	LHQ	83
5.4.2	QXF	88
5.5	Test results with new LHQ heater design	94
5.5.1	Comparison of measured and calculated resistances	95
5.5.2	Measured and simulated delays	98
5.5.3	Current decay for the different heater geometries	100
5.6	Concluding remarks	101
6	Simulation of protection heaters in an HTS coil	103
6.1	Reference YBCO coil	103
6.2	Developments in the simulation model	104
6.2.1	Heater delay definition	106
6.2.2	Quench propagation	106
6.3	Study 1: Parametric studies of heater delay	107
6.3.1	Parameters	107

6.3.2	Delay time dependence on current sharing temperature .	108
6.3.3	Delay time dependence on heater power	109
6.3.4	Delay time dependence on heater thickness	110
6.3.5	Delay time dependence on heater insulation thickness . .	111
6.3.6	Delay time dependence on heater geometry	111
6.4	Study 2: Quench propagation between heating stations	111
6.4.1	Needed heater coverage	112
6.4.2	Time to quench between heating stations	113
6.5	Ideas for alternative heaters	114
6.5.1	Co-wound heater	115
6.5.2	Layered heater	115
6.6	Concluding remarks	116
7	Conclusions	117
A	Coil and heater parameters	121
A.1	HQ01 and HQ02	121
A.2	LQ	121
A.3	HD3	121
A.4	11 T	121
A.5	LHQ and QXF	122
	Bibliography	127
