Abstract.....	I
Acknowledgements.....	III
List of publications	V
Introduction.....	11
Chapter 1	15
High Energy Physics needs and requirements	15
1.1. The Large Hadron Collider at CERN	16
1.2. Superconductivity and Cryogenics	17
1.3. The HL – LHC upgrade: needs and requirements.....	22
1.3.1 Introduction	22
1.3.2 A new generation of accelerator magnets based on Nb ₃ Sn	23
1.3.3 High Temperature Superconducting Transmission Lines.....	24
1.4. Typical Cryogenic Instrumentation	24
References.....	27
Chapter 2	31
Fiber Optic Sensors technologies and applications	31
2.1. Fiber Optic Sensors.....	32
2.1.1 FOS technology and fields of application	32
2.1.2 FOS for cryogenics.....	34

- 2.2. Fiber Bragg Grating Sensors..... 37
 - 2.2.1 FBG working principle..... 37
 - 2.2.2 FBG for cryogenic applications. State of the art 40
- 2.3. FBG sensors as a challenging technology for superconducting magnets and cryogenic applications 47
- References..... 49
- Chapter 3 54**
- Development of FBG based Thermal Cryogenic Sensor 54**
- 3.1. Introduction..... 55
- 3.2. Sensors design and fabrication..... 56
 - 3.2.1 Coated FBGs design and material selection 56
 - 3.2.2 Sensors fabrication 60
- 3.3. Sensors characterization in the range 300 – 4.2 K..... 62
 - 3.3.1 Cryo - cooler experimental set up..... 62
 - 3.3.2 PMMA coated FBG characterization 64
 - 3.3.3 Epoxy coated FBG characterization..... 70
- 3.4. Epoxy coated FBGs optimization 74
 - 3.4.1 Sensors selection 74
 - 3.4.2 Sensors calibration in the range 300 – 4.2 K..... 76
 - 3.4.3 Sensitivity study 78
- 3.5. Conclusions..... 81
- References..... 83
- Chapter 4 85**
- Validation of Fiber Optic Thermal Cryogenic Sensors for Superconducting Transmission Lines 85**
- 4.1. Introduction..... 86

- 4.2. Sensors integration in the SC – Link 87
- 4.3. FBGs validation in real application 91
 - 4.3.1 Temperature sensors set up..... 91
 - 4.3.2 Feasibility in the SC - Link 92
- 4.4. Feasibility study of using Rayleigh scattering fiber optic sensors in the SC - Link
95
- 4.5. Optimized epoxy coated FBGs validation in real application..... 98
 - 4.5.1 Temperature sensors set up..... 98
 - 4.5.2 Cryogenic tests 99
- 4.6. Conclusions..... 103
- References..... 105
- Chapter 5** 107
- Embedded Fiber Bragg Grating sensors for new generation of Superconducting
Magnets**..... 107
- 5.1. Introduction..... 108
- 5.2. Magnet structure and service life 109
- 5.3. Embedded FBG for strain and temperature measurements..... 112
- 5.4. Feasibility of strain and temperature monitoring with embedded FBG sensors
113
 - 5.4.1 Experimental set-up of Nb₃Sn cables stack instrumented with FBGs 113
 - 5.4.2 Experimental results of the impregnation monitoring 116
- 5.5. Sensors integration in the magnet 120
 - 5.5.1 Bonded FBGs on the magnet structures 120
 - 5.5.2 Embedded FBGs in Nb₃Sn race track coils 121
- 5.6. Magnet behaviour characterization..... 126
 - 5.6.1 Assembly at room temperature..... 126
 - 5.6.2 Cool down to 77 K and 1.9 K..... 128

5.6.3	Powering and quench monitoring.....	133
5.7.	Conclusions.....	137
	References.....	138
	Conclusions.....	141
