<b>Preface</b> .....	7
<b>List of symbols</b> .....	9
<b>1. Introduction</b> .....	15
<b>2. Geometrical structure of a surface and contact of surfaces</b> .....	21
2.1. Deterministic description of the surface .....	22
2.1.1. Single surface.....	22
2.1.2. Contact of two surfaces.....	25
2.2. Statistical description of the surface .....	29
2.3. Fractal description of the surface .....	33
<b>3. Deformation of interface of two contacting solids</b> .....	40
3.1. Criteria for mode of deformation .....	41
3.2. Models of the interface deformation based on assumption of the prevailing mode of deformation .....	43
3.3. Models of the interface deformation not assuming the prevailing mode of deformation.....	44
3.4. Models of the interface deformation for nonconforming rough surfaces....	51
3.5. Deformation of the interface during transient contact of solids .....	52
3.6. Role of thermal expansion in surface deformation.....	53
3.7. Thermoelastic instability in contact of two surfaces. Surface deformation during sliding.....	54
<b>4. Heat flow through the interface of two solids</b> .....	56
4.1. Non-equilibrium conditions at the interface of two media.....	56
4.1.1. Solid-solid interface.....	57
4.1.2. Solid-gas interface .....	60
4.2. Microscopic heat transfer phenomena at the interface .....	63
4.2.1. Solid-to-solid conduction.....	63
4.2.2. Heat transfer through interstitial materials.....	64
4.2.2.1. Heat transfer through a thin layer of a solid.....	65
4.2.2.2. Heat transfer through a thin layer of a gas .....	66
4.2.3. Solid-to-solid radiation .....	72
4.2.3.1. Transparent interstitial medium .....	72
4.2.3.2. Partially transparent interstitial medium .....	75
4.2.4. Convective heat transfer .....	78

4.3. Heat generation phenomena.....	80
4.4. Microscopic boundary conditions between contacting solids.....	84
<b>5. Macroscopic boundary conditions.....</b>	<b>86</b>
5.1. Microscopic versus macroscopic description of heat transfer in contacting solids.....	86
5.2. Problems of closure. Boundary constitutive relations .....	89
5.3. Macroscopic boundary conditions for slow spatial and temporal variations of macroscopic quantities along the interface .....	92
5.4. Properties of the surface microstructure functions .....	94
5.5. Physical interpretation of the macroscopic coefficients.....	96
<b>6. Theoretical modelling of thermal contact conductance in steady state of heat transfer .....</b>	<b>100</b>
6.1. General aspects of modelling of thermal contact conductance and heat generation factor for stationary solids.....	100
6.2. Single contact.....	104
6.3. Multiple contacts. Interaction between contact spots .....	107
6.3.1. Periodic (regular) arrangement of contact spots .....	109
6.3.2. Chaotic (random) distribution of contact spots .....	111
6.3.3. Multi-scale models of thermal contact resistance .....	115
6.4. Effect of macroscopic irregularities (nonconforming rough surfaces) .....	125
6.5. Effect of coatings and interstitial enhancement materials .....	127
6.6. Influence of thermoelastic coupling.....	130
6.7. Effect of corrugations .....	132
<b>7. Steady-state thermal contact conductance.....</b>	<b>135</b>
7.1. Influence of different factors on steady thermal contact conductance .....	135
7.1.1. Mechanical and thermal properties of bulk material.....	135
7.1.2. Geometrical structure of the interface.....	136
7.1.3. Mechanical load and loading history .....	140
7.1.4. Interstitial substances .....	142
7.1.5. Mean contact temperature.....	143
7.2. Directional effect .....	144
7.3. Hysteresis effect.....	146
7.4. Cylindrical joints.....	148
<b>8. Thermal contact resistance in nonhomogeneous materials in steady states .....</b>	<b>153</b>
8.1. Porous and granular media .....	153
8.2. Composites .....	163
8.3. Layered media .....	167

---

<b>9. Thermal contact conductance in transient states</b> .....	171
9.1. Transient thermal contact conductance during abrupt contact.....	171
9.2. Thermal conductance between fluidized bed and wall.....	177
9.3. Thermal contact resistance during periodic contact .....	180
9.4. Thermal contact resistance during metal forming .....	186
9.5. Thermal contact resistance in solidification processes.....	188
9.6. Thermal phenomena during sliding of solids .....	196
9.6.1. Partition of frictional heat.....	197
9.6.2. Thermal conductance for sliding solids and the heat generation coefficient .....	201
9.6.3. Mean temperature of the contact area and the flash temperature during sliding.....	216
<b>10. Experimental determination of the interface temperature, thermal contact conductance and other macroscopic thermal interface coefficients</b> .....	223
10.1. Determination of the interface temperature.....	223
10.2. Determination of the heat generated at the interface.....	225
10.3. Measurement of thermal contact conductance in a steady state.....	226
10.3.1. Measurements of the thermal contact conductance of flat joints .....	226
10.3.2. Measurements of the thermal contact conductance of cylindrical joints.....	228
10.3.3. Measurement of thermal contact conductance between work-material and die .....	229
10.3.4. Analogue methods of thermal contact conductance determination .....	231
10.4. Measurement of thermal contact conductance in transient states .....	232
10.4.1. Transient methods of measurement of the thermal contact conductance after abrupt contact of solids .....	232
10.4.2. Measurements of thermal contact conductance in periodic (repeated in time) contact.....	233
10.4.3. Measurements of thermal contact conductance during deformation of solids (metal forming).....	235
10.4.4. Measurements of thermal contact conductance during solidification...	240
10.4.5. Measurement of thermal contact conductance during sliding of solids .....	241
10.4.6. Other transient methods .....	249
10.5. Special topics – valve face/seat interface.....	249
10.6. Accuracy of measurements .....	250
<b>11. Control of heat transfer by varying thermal contact resistance</b> .....	253
11.1. Material of contacting solids.....	253
11.2. Macro- and micro-geometry of the contacting surfaces .....	254
11.3. Mechanical load.....	254

---

11.4. Interstitial materials .....	255
11.4.1. Fluidic interstitial materials .....	256
11.4.2. Metallic foils .....	259
11.4.3. Metallic screens .....	261
11.4.4. Metallic coatings .....	262
11.4.5. Sintered coatings .....	265
11.4.6. Non-metallic coatings (oxide, anodic, ceramic and diamond-like films) .....	266
11.4.7. Adhesives (silicones, epoxies, cements) and polymers .....	271
<b>12. Special applications of thermal contact resistance</b> .....	<b>275</b>
12.1. Bolted joints .....	275
12.2. Thermal properties measurements .....	279
12.3. Microelectronics .....	281
12.4. Internal combustion engines and turbines .....	284
12.5. Cryogenics .....	287
12.6. Space vehicles .....	289
12.7. Medicine .....	289
12.8. Superconducting materials .....	290
12.9. Nuclear engineering .....	291
12.10. Other applications .....	292
<b>Conclusions and recommendations for further research</b> .....	<b>293</b>
<b>References</b> .....	<b>297</b>
<b>Examples of the prediction of thermal contact conductance</b> .....	<b>332</b>
<b>Theoretical formulae for prediction of thermal contact conductance</b> .....	<b>339</b>
<b>Experimental correlations for prediction of thermal contact conductance</b> .....	<b>341</b>
<b>Acknowledgements</b> .....	<b>343</b>
