

I	Introduction	5
II	e^+e^- Linear colliders; an overview	11
	2.1. General remarks	13
	2.2. NLC/JLC	15
	2.2.1. NLC structures	17
	2.3. TESLA	20
	2.4. ILC	23
III	TESLA superconducting structure and alternative structures for ILC	27
	3.1. General remarks	29
	3.2. TESLA superconducting structure	30
	3.2.1. Interaction with accelerated beam	30
	3.2.2. Intrinsic wall losses	34
	3.2.3. Maximum fields on the cavity wall	35
	3.2.4. Cell-to-cell coupling	36
	3.2.5. Cell shape optimization	36
	3.2.6. Parameters of the TESLA and ILC structures	37
	3.2.7. Vertical test	39
	3.2.8. Test examples; single-cell cavities	41
	3.2.9. Test examples; 9-cell cavities	42
	3.2.10. Test examples; large grain single-cell cavities	43
	3.3. Suppression of HOMs	45
	3.3.1. HOM trapping inside cavity	46
	3.3.2. Trapping inside cryomodule	47
	3.3.3. Measures against trapping	48
	3.3.3.1. Number and matching of cells	48
	3.3.3.2. Weakly coupled structures	50
	3.3.4. HOM couplers	51
	3.3.4.1. Coaxial line couplers	51
	3.3.4.2. Waveguide couplers	52
	3.3.5. Beam-line absorbers	53
	3.3.5.1. Room temperature absorbers	53
	3.3.5.2. Low temperature absorbers	54
	3.3.6. HOM frequency and damping statistics for TESLA structures	55

3.4.	Transient state in multi-cell structures	59
IV	Superconducting superstructures	65
4.1.	General remarks and motivation	67
4.2.	Superstructure concept	68
4.3.	RF properties of SST-I and SST-II	70
4.3.1.	Bunch-to-bunch energy modulation	73
4.3.2.	Adjustment of the accelerating field	73
4.3.3.	Copper models	74
4.4.	Beam test of two Nb prototypes	78
4.4.1.	Preparation of Nb prototypes	79
4.4.2.	Linac preparation and field profile adjustment at 2 K	79
4.4.3.	Bunch-to-bunch energy modulation test	82
4.4.4.	HOM damping test	85
4.5.	Summary of the experiments and future improvements	89
V	Superconducting photo-injector	93
5.1.	General remarks	95
5.2.	Lead-Niobium SRF-Gun	95
5.2.1.	Quantum efficiency of Lead	96
5.2.2.	RF design	96
5.2.3.	RF-cold tests	98
5.3.	Summary and perspectives	102
VI	Final remarks and acknowledgements	103
	References	107
