

Contents

Index of symbols	5
1. Introduction	7
2. Physical basis of quantitative X-ray microanalysis	11
2.1. X-ray excitation volume in a material	11
2.2. Introduction to correction methods	15
3. X-ray microanalysis of phases bigger than X-ray excitation volume	21
3.1. Methods based on models of electron scattering in sample	21
3.1.1. Atomic number correction	23
3.1.2. X-ray absorption correction	26
3.1.3. Fluorescence corrections	28
3.2. Methods based on $\varphi(\rho z)$ function	31
3.3. Mixed models methods	32
3.4. Specific problems in microanalysis of elements emitting soft X-rays	35
4. X-ray microanalysis of phase bigger than the primary X-ray excitation volume but smaller than secondary X-ray excitation one	41
4.1. Corrections for fluorescence in the surrounding phase	41
4.2. Corrections for fluorescence in the analyzed phase	44
5. X-ray microanalysis of thin films deposited on solid substrates	47
5.1. Correction methods used in quantitative X-ray microanalysis of thin layers ..	48
5.1.1. Calibration methods	49
5.1.2. Monte Carlo methods	49
5.1.3. Methods based on $\varphi(\rho z)$ functions	51
5.1.4. Methods based on models of electron scattering in the material ...	61
5.1.5. Fluorescence corrections	71
5.1.6. The assessment of the correction methods used in the X-ray microanalysis of thin layers	80
5.2. The experimental procedure for the quantitative X-ray microanalysis of thin coatings	82
6. X-ray microanalysis of multilayered samples	85
6.1. Correction methods used in quantitative X-ray microanalysis of multi- -layer samples	85
6.2. Experimental procedure of quantitative X-ray microanalysis of multi- -layer samples	86

7. X-ray microanalysis of micro-areas located at interface	95
7.1. Correction methods in X-ray microanalysis of micro-areas located in the distance bigger than width of primary X-ray excitation zone	95
7.1.1. Corrections for fluorescence in the adjoining phase	96
7.1.2. Corrections for fluorescence in the analyzed phase	100
7.2. Correction methods in X-ray microanalysis of micro-areas located in the distance smaller than width of primary X-ray excitation zone	102
7.2.1. Determination of the $\phi(\rho z)$ function	103
7.2.2. Determination of the concentration of elements in micro-areas situated at an interface	106
8. X-ray microanalysis of small particles	109
8.1. X-ray microanalysis of free small particles	110
8.1.1. The methods based on geometric modeling of the particle shape	110
8.1.2. Methods based on measurement of signal to background ratio ...	112
8.1.3. Monte Carlo methods applied to individual particles	113
8.1.4. Corrections for fluorescence	113
8.2. The X-ray microanalysis of small particles occur in matrix	114
8.2.1. Methods based on estimation of matrix share in X-radiation excitation volume	114
8.2.2. Methods based on analyses conducted with various electrons beam diameters	116
8.2.3. Monte Carlo methods applied to particles within a solid matrix ..	117
8.2.4. The author's method	118
9. Concluding comments	123
References	127
